

PROJECT NEVERMORE

THE CREATIVE **AUTONOMY** PROTOCOL

| A production-grade, decentralized system architecture for running an automated creative micro-studio using structured data and deterministic multi-agent flows.

PHASE 01

MICRO-STUDIO ARCHITECTURE

SYSTEMIC WORKER SPECIALIZATION

The Specialized Org Chart

Decentralized Execution

Prevent "all-in-one" AI agent pitfalls of rule degradation, context bloat, and unexpected hallucinations. Deconstruct the studio workflow into highly modular, single-responsibility virtual roles coordinated by a master system orchestrator.

The Logic Framework

By enforcing strict boundary safe zones and separating goals, each specialized agent performs deep execution tasks without context bleed. The human retains master control over strategic intent and final quality gates.

Multi-Agent Role Mapping

Orchestrator

Code name **Axis**. Handles task sequencing, goal decomposition, and shared state parameters across the pipeline.

Creative Director

Maintains cinematic aesthetics, compiles hex matrices, and generates strict XML parameters for execution tools.

Quality Control

Executes a 15-point diagnostic pass to check dimensions, aspect ratios, and format requirements before final release.

PHASE 02

DETERMINISTIC HANDOFFS

STATE PERSISTENCE & VERIFICATION

In-Memory State Schema

Metadata Category	File / Reference Key	Workflow Control Status	Output Target
Project Context	brand_dna_neverrender.md	Locked Directive	Aesthetic Continuity
Visual Ground Truth	Saved_Frame_Asher.jpeg	Identity Model Lock	Zero-Shot Face ID Match
Creative Blueprint	shot_matrix_v11.xml	Active Schema Data	Omni Video Telemetry
Repurposed Asset	pillar_draft_v02.md	Quality Inspected	Multi-Platform Content

The 60/30/10 Brand Matrix

60% Base Structure

Deep slate-teal [#124559] and clinical icy white [#EAFBFF] defining concrete walls, viewports, and heavy structural laboratory shadows.

30% Material Energy

Electric cyan [#00E5FF] and jade teal [#00C49A] actively tracking background code matrices, HUD terminals, and specular glares.

10% Disruptive Pop

Blinding coral pink-red [#FF6B6B] and glowing copper-orange highlights accenting physical extraction cores and iris glints.

PHASE 03

HUMAN-IN-THE-LOOP GOVERNANCE

DURABLE SESSION CHECKPOINTS

Durable Checkpoint Gates

Workflow Suspension

To eliminate operational risks, the system serializes the complete active session state. Upon quality-control validation, the orchestrator halts execution, alerts the director-engineer, and pauses downstream database tasks indefinitely.

Active Review Gate

The director reviews visual drafts, luma curves, and estimated token costs on a structured control dashboard. Strategic approvals trigger a database memory restore, sending the assets safely down the final assembly line.

PHASE 04

30-DAY STUDIO LAUNCH PLAYBOOK

FROM IDEA TO OPEN-SOURCE LAB

Week-by-Week Execution Plan

Week 1: Scaffolding

Validate real client bottlenecks. Compile technical rules and persist your master Brand DNA document.

Week 2: Pipeline

Map the multi-agent workflow. Define strict JSON schemas and register deterministic tool APIs.

Week 3: Alignment

Configure specialized models. Build generator-critic self-reflection feedback loops.

Week 4: Launch

Run the end-to-end pilot. Scale payments, optimize caching, and focus purely on strategic governance.

THE AKASHIC RECORD

Join the Open-Source Lab

Learn Together in Public without Gimmicks or Paywalls.
