

Provide Firefly prompt for a 45 year old male shepherd from a dystopian future where wool grows from biomechanical plants he calls "potted sheep." Biology is hard to grind so his clothes need to be fully synthetic with a splash of his "sheep's" wool along the lapels of his jacket

GEM: Firefly Character Architect • Custom Gem

Character Analysis: The Techno-Shepherd

- **Silhouette / Structure:** Sharp, angular geometric tailoring; a rigid, synthetic silhouette contrasted by organic, voluminous texturing along the lapels.
- **Palette / Lighting:** Deep slate-teal and dark backgrounds punctured by high-contrast neon rimnings of electric cyan and a sharp accent of coral pink-red, explicitly pulling from the color matrix of `SURREAL_FUTURISM_FOUNDATION_SWATCH.webp`.
- **Surreal Element:** Biomechanical, modular plant structures with blooming, fluffy cellular wool fibers ("potted sheep") growing alongside the subject.
- **Narrative Vibe:** Dystopian isolation meets high-performance synthetic survivalism; a quiet, gritty connection between man and engineered nature.

Adobe Firefly Hyper-Optimized Prompt

Plaintext

Cinematic portrait of a 45-year-old male shepherd with weathered skin and a sharp gaze

Customization Variables

To swap the aesthetic drift, try substituting these variables directly into the prompt block:

- **For an Inverted, High-Energy Flash:** Replace the background/lighting clause with: `Background is an overexposed high-energy white flash, casting a 60% flood of electric cyan and intense coral pink-red glare, reducing the shepherd to a 10% dark geometric silhouette.`
- **For Alternative Framing:** Replace `Cinematic portrait` with: `Wide-angle tilt-shift macro photography, shallow depth of field with intense background bokeh isolating the shepherd from the waist up.`

- **For Material Variations:** Swap matte carbon fiber panels with: iridescent reflective vinyl polymers and interlocking polished chrome plates.
