

OMNI PROMPT: LAUNCHBAY PLASMA TERMINAL BREAKOUT

Project Matrix: PROJECT_NEVERMORE

Sequence Reference: S06_PLASMA_BREAKOUT_VISTA

Absolute Duration: 4.0 Seconds (Kinetic Warp Sequence)

```
<!-- RENDERING TELEMETRY & LARGE-FORMAT IMPACT CONSTRAINTS -->
```

```
<camera_profile>
```

```
    Massive wide-angle sci-fi cinematic shot. Axis layout simulates a large-format 15-perf 70mm cinematography framework, subverting macro diorama constraints into extreme local geometry scale. Camera executes a violent, high-velocity kinetic pull-back snap-zoom pass starting precisely at 1.0s. Zero smooth curves; camera trajectory matches a severe backward coordinate displacement vector, tracking the speed of the accelerating vessel.
```

```
</camera_profile>
```

```
<!-- THE FOUNDATIONAL LAB COLOR MATRIX (INVERTED HIGH-ENERGY EXPLOSION) -->
```

```
<color_grading_matrix ratio="Inverted_60_30_10_High_Energy_Splash">
```

```
<color_splash weight="60%"> A blinding, volatile, overexposed flood of pure electric-cyan (#00E5FF) and coral-red (#FF6B6B) plasma glare exploding outward from a central engine core array, completely clipping highlight fields across the frame.
```

```
</color_splash>
```

```
<dynamic_materials weight="30%"> Shifting neon-indigo energy arcs and burning turquoise lightning filaments fracturing across the surrounding space-time fabric.
```

```
</dynamic_materials>
```

```
<base_architecture weight="10%"> Towering launch bay geometric columns, the terminal clock framework, and the main spaceship hull are reduced entirely to sharp, hard-edged solid-black silhouette matrices completely detached from background texture.
```

```
</base_architecture>

```
<!-- OPTICAL & WARP PHYSICS -->
```

```
<lighting_and_materials>
```

```
    Volumetric light ray beams cutting through dense air grids under massive kinetic stress. Intense refractive caustics creating a lens overexposure bloom effect. Violent rainbow spectral edge separation (chromatic aberration) tearing across the high-contrast
```

perimeter boundaries of the solid-black silhouettes. Shifting environmental lighting layers update instantly across structural edges.

</scene_action>

<!-- VISUAL COMPOSITION & TIMELINE ACTION -->

<scene_action>

[0.0s - 1.0s] Static wide shot. The solid-black silhouette of the spaceship sits locked within the vertical launch bay columns; the background console fields pulse with high-contrast electric-cyan indicators.

[1.0s - 4.0s] Massive ignition event. Sixty percent of the frame turns into a volatile flood of bright electric-cyan and coral-red plasma overexposure glare. The silhouetted ship accelerates instantly from a standstill out of top-center, leaving a brilliant, burning solid-black streak across a fracturing space-time rift. Camera executes a rapid, violent kinetic pull-back snap-zoom tracking the launch. Zero facial features, zero legible text, zero smooth gradients.

</scene_action>

<!-- DECOUPLED SPATIAL AUDIO STREAMS -->

<audio_system_streams>

<music_track semantic="Visual_Mood">

[0.0s - 1.0s] Silent mid-register step-sequencer layer held behind a high-pass filter. Exactly at 1.0s: The music bed drops out completely, leaving only a sustained high-pass delay echo tail that clip-fades into an extreme low-frequency sub-bass analog riser.

</music_track>

<effects_track semantic="Event_Timing">

[Timestamp: 1.0s] A massive, structural low-frequency engine compression thrum rolling flatly at -6dB, transitioning instantly into a high-transient electrical whip-snap sound event and a tearing open-air white-noise vacuum hiss that holds a long decay scale until 4.0s.

</effects_track>

<speech_track semantic="Dialogue_Prosody">

POST-PRODUCTION TELEMETRY OUTPUT

Premiere Pro Lumetri Grading Specs

- **Input Master LUT:** Technical Rec.709 large-format space normalization.
- **Dynamic Exposure Transition:** Keyframe Exposure parameters to drop cleanly by -1.2 stops between 1.0s and 1.5s to manage camera iris clipping thresholds during the overexposed plasma eruption.
- **Temperature / Tint:** Shift color balance warm to 6500K to enrich the hot coral-red engine wash ($\text{\#FF6B6B}$), matching against a sharp -8 green modifier to maximize saturation across the electric-cyan neon indicators ($\text{\#00E5FF}$).
- **Shadow Mapping:** Drive black pedestal values deep into a dedicated slate-teal curve pedestal layer ($\text{\#124559}$), turning all spaceship elements and launchway geometry into pure, solid-black silhouette matrices.

Descript Pacing Rules

- **Timeline Boundaries:** Absolute container sequence tracking exactly from 0.000s to 4.000s mark with hard snap-cuts at entrance and exit frames.
- **Dialogue Placement:** Complete vocal gating circuit active (100% tracking mute).
- **Mastering Limiter Layout:** Position a fast brickwall lookahead peak limiter on the effects channel loop at -0.5 dB to support the deep sub-bass engine signature, preventing digital wave clipping during the final vacuum rip event. Attach signed C2PA assertion manifests to secure generative design authenticity parameters upon file export.
