

OMNI PROMPT: COCKPIT STROBE INTENSITY

DEFINITION

Project Matrix: PROJECT_NEVERMORE

Sequence Reference: S02B_COCKPIT_INTENSITY_PUSH

Target Duration: 4.5 Seconds

XML

```
<omni_shot_configuration>
  <!-- RENDERING TELEMETRY SPECIFICATIONS -->
  <camera_profile>
    Cinematic macro close-up, fixed tracking axis. Crystalline foreground focus locked
    directly onto Vespera's facial structures, utilizing an extremely shallow depth of field to
    resolve sharp skin pore and eyelash detail. Sub-millimeter tilt-shift lens distortion isolates
    her eyes, throwing the rear flight deck console blocks into abstract, cream-like geometric
    bokeh shapes. Cam executes a slow, linear, high-tension dolly-forward camera pass
    directly toward her face.
  </camera_profile>

  <!-- THE FOUNDATIONAL LAB COLOR MATRIX (DYNAMIC TRANSITION METRICS) -->
  <color_grading_matrix ratio="Standard_to_Inverted_Dynamic_Flip">
    <phase_1_baseline duration="0.0s-1.5s" weighting="Standard_60_30_10">
      60% Base Architecture: Clinical icy white (#EAFBFF) interior cockpit bulkheads and
      deep slate-teal (#124559) shadow pockets. 30% Dynamic Energy: Warm, ambient
      sunset-gold console glow reflecting off glossy dashboard surfaces. 10% Disruptive Pop:
      Quiescent electric cyan (#00E5FF) and coral pink-red (#FF6B6B) inactive toggle status
      lines.
    </phase_1_baseline>
    <phase_2_kinetic duration="1.5s-4.5s" weighting="Inverted_60_30_10_High_Energy_Splash">
      60% Color Splash: Violent, high-frequency overexposure flood of flashing electric
      cyan neon and hot coral-red glare strobe pulses. 30% Materials: Deep midnight slate-teal
      metallic frames. 10% Base Architecture: Fragmented, stark icy-white silhouettes tracking
      across dynamic moving shadow vectors.
    </phase_2_kinetic>
  </color_grading_matrix>

  <!-- OPTICAL & LIGHTING LOGIC -->
  <lighting_and_materials>
```

Volumetric internal emission beams cutting through cockpit air grids. High-frequency refractive panel caustics casting flickering light paths over her profile. Intense rainbow spectral edge separation (chromatic aberration) localized strictly around the perimeter edges of the violently strobing neon dashboard panels. Moving highlights hold complete physical geometric consistency across her skin texture

</lighting_and_materials>

<!-- VISUAL COMPOSITION & ACTION CORE -->

<scene_action>

Tight cinematic close-up shot of Vespera sitting inside the spaceship cockpit. Absolute subject binding active: her strong facial bone structure, intense lavender eyes, and precise short electric-cyan bob haircut remain perfectly consistent, un-warped, and structurally frozen. Camera pushes in with linear tension on her face. At 1.5s, the ambient cockpit lighting transitions instantly from an even sunset-gold glow to a high-speed, high-contrast electric-cyan and coral-red neon strobe pattern. Moving neon flashes cast sharp, hard-edged dynamic shadows tracking across her cheeks and jawline. No facial morphing, zero suit color shifts, flawless physics

</scene_action>

<!-- DECOUPLED INTEGRATED AUDIO MATRIX -->

<audio_system_streams>

<music_track semantic="Visual_Mood">

0.0s - 1.5s: Low-frequency analog synth pad drone holding an unresolved minor chord suspension. Exactly at 1.5s: A fast-pulsing, high-frequency mid-register step-sequencer pattern cuts in violently, ticking in an accelerated 16th-note subdivision to build immediate psychological tension.

</music_track>

<effects_track semantic="Event_Timing">

Timestamp 1.5s: A sharp, high-transient electronic relay snap-click event, transitioning immediately into a cyclic cascade of low-amplitude data packet chime sweeps operating flatly at -16dB, synchronized precisely to the rhythmic duration of the neon panel flashes.

</effects_track>

<speech_track semantic="Dialogue_Prosody">

<speaker ID="Vespera" status="Silent" />

</speech_track>

</audio_system_streams>

<!-- OBJECT-BASED SPATIAL METADATA -->

<spatial_metadata_anchors>

<console_relay_strobe coordinates="Cartesian(0.0, 0.8, 0.4)" tracking="World-Locked_Dashboard_Bay">

High-frequency electronic audio clicks are locked to the lower visual bounds,

```
utilizing narrow horizontal panning parameters to preserve sharp micro-scale layout  
localization as the camera dollies forward

</omni_shot_configuration>
```

POST-PRODUCTION TELEMETRY OUTPUT

Premiere Pro Lumetri Grading Specs

- **Input Master LUT:** Technical Log-to-Rec.709 color transform.
- **White Balance Telemetry:** Set color temperature to 5500K to keep the clinical icy whites (#EAFBFF) clean, tracking against a custom $+8$ tint booster to amplify the hyper-saturated hot coral channels (#FF6B6B).
- **Shadows & Pedestals:** Drag lower black points down into deep slate-teal (#124559) curves, formatting rich structural depth across cockpit shadow pockets and panel crevices to maximize outline definition.
- **Highlights & Kinetic Exposure:** Keyframe Exposure parameters to plunge by -0.3 stops exactly at 1.5s to manage camera iris accommodation during the explosive influx of neon glare. Isolate electric cyan (#00E5FF) spectrum bounds with fine secondary color masks, scaling luminance by $+16\%$ to generate an intense, flashing bloom around visor text boundaries.

Descript Pacing Rules

- **Timeline Boundaries:** Absolute container tracking from 0.000s to 4.500s mark footprint. Cut-match execution parameters active.
- **Audio Alignment Sync:** Position the high-transient electronic relay click precisely at 1.500s to co-denoise with the initialization frame of the inverted color splash.
- **Mastering Compression:** Apply a fast brickwall lookahead peak limiter on the effects bus at -1.0 dB to catch high-frequency electronic transients, keeping structural mid-range synthesizer frequencies clear from acoustic muddying. Inject tamper-evident C2PA cryptographic provenance manifests into the asset metadata layer upon final file container compilation.
